Bikini: Test Script Flow

1. Execution Flow

> **Warning:**
> This is very experimental and will change

1. Read introspection file from the IntrospectionUrl specified.
2. Assign each item in the introspection file to a variable named introspection.*item-name*.
3. For each directory in TestDir:
    1. Get the test-name and test-description from description.txt.
    2. In alphabetical order for each *action*.post file in the directory:
        1. Get action-name and atom-description from *action*.txt.
        2. Substitute variables in *action*.post.
        3. Submit *action*.post.
        4. Save the result from the post.
        5. Substitute variables in *action*.resp.
        6. Compare the reslut with *action*.resp storing regexp matches in the assigned variables.
